

SELF-ADHESIVE LABELLER SEMIAUTOMATIC URANIA 3N

The self-adhesive labeling machine Urania 3N attaches self-adhesive labels and back labels on any type of cylindrical container having a diameter ranging from 60 to 110 mm.

Labels of any shape and height up to 175 mm can be attached.

The labels and back labels are to be placed on the same belt in an alternated way leaving a distance of 2 or 3 mm between them.

Once the container gets placed the machine automatically starts labelling; the distance between label and back label can be adjusted by means of a device controlled by a graduated knob.

If needed, the machine can also apply only one label at a time.

The machine has a rotary smoothing system with guillotine which allows for the most accurate labelling.

The machine is always ready for use and being extremely easy to run, no qualified operator is required.

SELF-ADHESIVE LABELLER SEMIAUTOMATIC URANIA 3N

Spécifications

Label surface application	Cylindrical
Numbers of labels applied	1 or 2 (apply 2 labels alternated on the same belt)
Frame machine material	Aluminium – Stainless steel
Maximum label height (standard)	175 mm
Diameter range container (standard)	60 – 110 mm
Engines	2 engines 230V-single-phase; P = 100W
Maximum production	800-900 p/h
Machine sizes	53 (H) x 55 (L) x 34 (W) cm
Machine net weight	Kg.22
