

GLUING MACHINE EME 180 N

The EME 180 N, is the smallest and most versatile version of the series, usable for labels or sheets with a maximum width of 180 mm, it is particularly suitable for the application of the state markings.

The label is inserted by the operator under the spindle in front of the gluing cylinder which, with its continuous rotation, drags it and glues it at the same time, handing it to the operator ready to be applied.

A special device allows the micrometric adjustment of the glue and thus allows a perfect gumming and the maximum cleaning of the label.

The EME 180 N is made of steel, brass and ABS.

All the parts in contact with the glue are interlocking and can be removed and reassembled without the use of tools, making the gluing machine very simple and quick at the end of the working cycle.

GLUING MACHINE EME 180 N Spécifications	
Useful width	180 mm
Dimensions	240 x 230 x 180 mm
Weight	6.000 kg
Power supply	230 V - 50-60 Hz - single phase (on request 110 V)
Power consumption	60 W
